DIMOVET

Diminazene Aceturate-70 Mg + Phenazone B.P.-375 Mg

Injection For Veterinary Use

🧪 Description

A sterile injectable solution combining Diminazene Aceturate, a potent antiprotozoal agent, with Phenazone B.P., an analgesic and anti-inflammatory agent.
Formulated to treat protozoal infections and associated pain or inflammation in animals.
Clear to slightly yellowish solution, free from visible particles, supplied in 30 mL and 90 mL sterile vials or ampoules for veterinary use.

🔍 Specifications

- Diminazene Aceturate: 70 mg per mL
- Phenazone B.P.: 375 mg per mL
- Sterile, pyrogen-free injectable solution
- Complies with pharmacopoeia standards
- Clear and free of particulate matter

⚙️ Composition and Excipients

Each mL contains:

- Diminazene Aceturate — 70 mg
- Phenazone B.P. — 375 mg
- Vehicle: sterile aqueous or suitable pharmaceutical vehicle q.s.

🧴 Product Form

- Sterile aqueous injectable solution
- Available in 30 mL and 90 mL glass ampoules or vials

🏷️ Indications

- Treatment of protozoal infections such as trypanosomiasis and babesiosis in animals
- Relief of associated pain and inflammation due to infections/ Use under veterinary supervision

💉 Dosage and Route of Administration

- **Route:** Intramuscular (IM) or deep subcutaneous injection
- **Dosage:** Species-specific; to be determined by a licensed veterinarian
- Avoid intravenous administration unless explicitly prescribed

🛠️ Usage and Advantages

- Combines effective antiprotozoal and analgesic properties
- Provides symptomatic relief from pain and inflammation
- Convenient multi-dose volumes available for various animal sizes

⚠️ Adverse Effects

- Possible injection site irritation or swelling
- Hypersensitivity reactions in rare cases
- Overdose may lead to neurotoxicity or kidney damage

🛑 Precautions

- Use only under veterinary guidance
- Monitor for allergic or adverse reactions
- Avoid use in animals with known sensitivity to components
- Observe withdrawal periods in food-producing animals

⏳ Withdrawal Period

Varies by species and local regulations. Consult veterinary authorities before administration in food-producing animals.

📦 Storage and Handling

- Store at 15°C to 30°C, protected from light and freezing
- Use sterile equipment and aseptic technique
- Discard unused portions safely

DOTCOM PHARMA

🔒 HS / HSN Code

- **HS Code:** 30049099
- **HSN Code:** 3004

(Typical classification for veterinary medicaments.)

🩹 Special Instructions

- Do not mix with other injectables unless authorized
- Inspect solution prior to use
- Administer only under veterinary supervision

👥 Veterinary and Human Use Clarification

- For veterinary use only; not for human administration

❓ Frequently Asked Questions (FAQs)

What infections does this treat?
Primarily protozoal infections like trypanosomiasis and babesiosis.

Can it be used in all animal species?
Only as prescribed by a veterinarian.

What is Phenazone's role?
It acts as an analgesic and anti-inflammatory to reduce pain and swelling.

How is it administered?
Intramuscularly or deep subcutaneously under veterinary supervision.

Is the 90 mL size suitable for large animals?
Yes, it allows treatment of larger or multiple animals.

Are there risks of overdose?
Yes, overdose can cause serious toxicity; strictly follow veterinary dosage.
