

Rubber Gloves Surgical / Surgeon

Description

Rubber Gloves Surgical / Surgeon Non-Sterile Rubber are protective hand coverings made from natural rubber latex. These gloves are designed to provide a barrier against contaminants, dirt, and bodily fluids during surgical or medical procedures. Although non-sterile, they are widely used for examinations, preparation, and non-critical surgical tasks where sterility is not mandatory.

Specifications

- Material: Natural rubber latex
- Type: Non-sterile surgical/surgeon gloves
- Size: Available in various sizes (Small, Medium, Large, Extra Large)
- Colour: Typically white or cream
- Texture: Smooth or lightly powdered for ease of donning
- Thickness: Medium thickness for durability and dexterity

Sizes & Shapes

- Sizes: S, M, L, XL to fit different hand sizes
- Shape: Ambidextrous or anatomically shaped for better fit
- Design: Fingertipped gloves with reinforced fingertips for durability

Types

- Non-sterile surgical rubber gloves
- Powdered or powder-free options
- Disposable, single-use gloves

Material

- 100% natural rubber latex
- Contains protein allergens (consider alternatives for latex-sensitive individuals)

Category

Medical Supplies → Surgical Gloves → Non-Sterile Rubber Gloves

Product Form

- Packed in boxes of 50 or 100 pairs
- Single-use disposable gloves
- Non-sterile packaging

Usage

- Protection during surgical preparation and minor procedures
- Barrier protection for surgeons and medical staff
- Used in clinical examinations, handling medical equipment, and cleaning

Advantages

- Excellent tactile sensitivity and dexterity
- Good barrier against fluids and contaminants
- Comfortable and flexible fit
- Cost-effective option for non-sterile procedures

Disadvantages

- Not suitable for sterile surgical environments
- Latex allergies can be an issue for some users
- Non-sterile gloves not recommended for invasive procedures

Precautions

- Avoid use if latex allergy is known or suspected
- Check gloves for tears or defects before use
- Use only in non-sterile environments or where sterility is not critical
- Dispose of after single use to prevent contamination

HS and HSN Codes

- HS Code: 4015.11
- HSN Code: 4015

Handling Instructions

- Wash hands before donning gloves
- Inspect gloves for integrity before use
- Remove carefully to avoid contamination
- Dispose of gloves in appropriate biohazard waste containers

Sterilization Details

- Gloves are supplied non-sterile and intended for single use
- Do not attempt to sterilize and reuse

Veterinary Application

- Used by veterinary staff for examinations and minor procedures
- Provides protection against contaminants and animal fluids
- Ideal for routine handling and non-invasive tasks

Human Application

- Used in human medical settings for examinations and non-sterile procedures
- Commonly worn by surgeons during preparation stages
- Provides a protective barrier during handling of equipment and minor interventions

? Frequently Asked Questions (FAQs)
