

Baby Tray with Lid

Product Description

The **Baby Tray with Lid** is a sterile-grade container designed for the safe holding, handling, and transport of newborn-related medical tools, dressings, or infant care items during clinical procedures. The lid ensures protection from contamination and maintains hygiene in neonatal environments. Commonly used in hospitals, pediatric clinics, and maternity wards.

Specifications

- **Material:** Medical-grade stainless steel / BPA-free autoclavable plastic
- **Lid:** Snap-on or hinged, secure fit
- **Tray Dimensions:** Varying sizes – typically 20 cm to 40 cm length
- **Finish:** Smooth, polished for easy cleaning

Sizes & Types

- **Sizes Available:** Small / Medium / Large
- **Types:**
 - Full stainless steel tray with steel lid
 - Plastic tray with transparent plastic lid
 - Slotted tray options for instrument draining

Category:

Hospital Utility Products > Neonatal Equipment > Trays & Containers

Product Form:

Reusable, autoclavable tray with matching lid – sold individually or in sets

Human Application:

- Storage and transfer of newborn-care items in hospitals
- Sterile instrument handling during neonatal procedures
- Dressing or medicine prep trays in paediatric wards

Veterinary Application:

- Used in neonatal animal care setups (puppies, kittens, exotic pets)
- Storage of syringes, towels, and feeding tools for newborn animals

Advantages

-  Maintains hygiene with fitted lid
-  Durable and autoclavable
-  Stackable and space-efficient
-  Multiple sizes for varied clinical uses

Disadvantages

-  If improperly sealed, lid may come loose
-  Plastic versions may degrade over time with repeated sterilization

Precautions

- Clean and sterilize thoroughly before use
- Avoid harsh chemicals on plastic lids
- Ensure lid is secured properly during transport

Handling & Maintenance

- Autoclave safe (both tray and lid if compatible)
- Wipe dry after sterilization to prevent water spots or microbial growth
- Store with lid in closed position to maintain sterility

HS /HSN Code Table

Code Type	Code	Use
HS Code	7324.90	For international trade/classification
HSN Code	7324.90.90	For Indian GST/commercial invoicing

Frequently Asked Questions (FAQs)

Q: Is the baby tray safe for sterilization?

A: Yes, both stainless steel and medical-grade plastic trays are autoclavable.

Q: Can I use the same tray for human and veterinary applications?

A: Yes, just ensure it's sterilized properly between uses.

Q: Are lids interchangeable between sizes?

A: No, lids are usually size-specific to ensure a tight fit.

Q: Will the plastic lid warp in the autoclave?

A: Not if it's made from certified autoclavable material — always check before sterilizing.

Q: Do trays come with non-slip bases?

A: Some models may feature rubberized or textured bases; others may not.
