

# Straw Tweezer

## Description

The **Straw Tweezer Curved** is a precision instrument designed to grasp and manipulate small objects during surgical and veterinary procedures. Its curved tips provide better access and control in tight or difficult-to-reach areas. Widely used in both human and veterinary medical fields.

## Specifications

- **Sizes Available:** 6", 7", 8", 10", 12"
- **Shape:** Curved tips for enhanced reach and precision
- **Material:** High-quality surgical stainless steel

## Material

- Surgical grade stainless steel ensures durability and resistance to corrosion
- Autoclavable for safe reuse

## Category

- Surgical Forceps / Tweezers

## Product Form

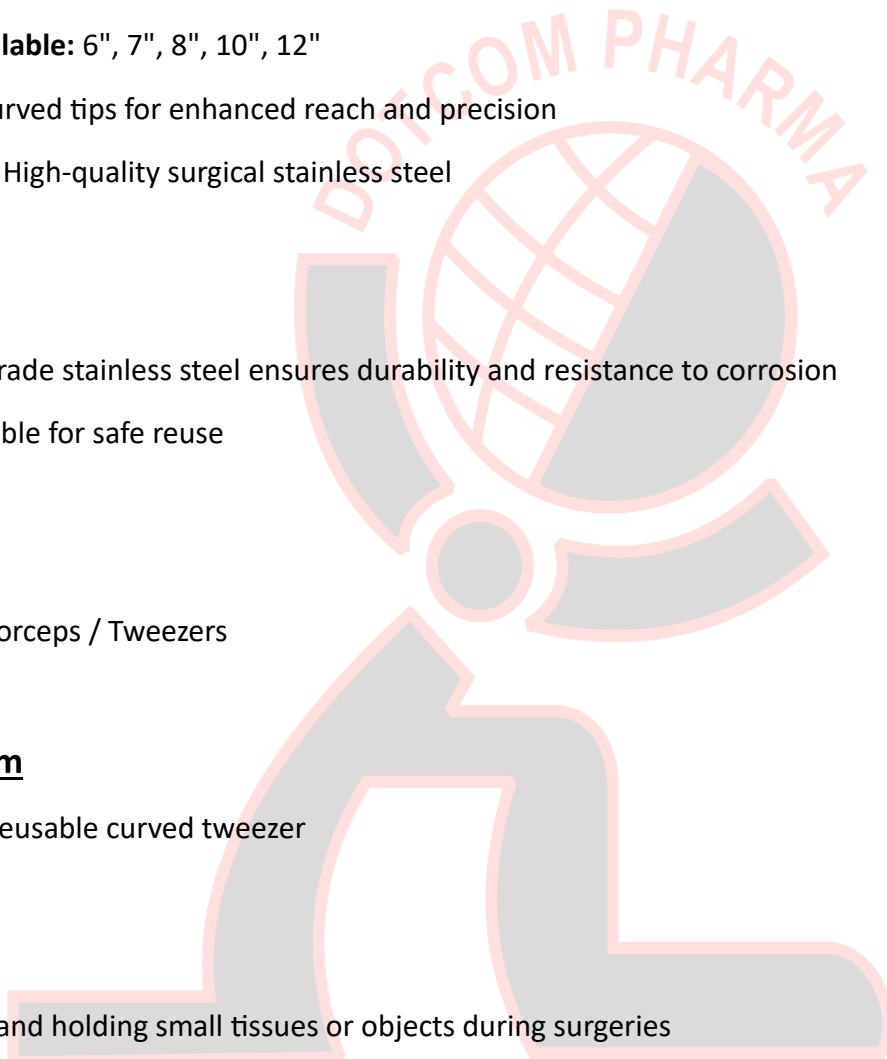

- Manual, reusable curved tweezer

## Usage

- Grasping and holding small tissues or objects during surgeries
- Assisting in suture placement or removal
- Handling delicate tissues without causing damage

## Advantages

- Curved design offers improved accessibility
- Durable, corrosion-resistant construction
- Suitable for both veterinary and human applications

## ✘ Disadvantages

- Requires proper sterilization to maintain hygiene
- May need regular sharpening or maintenance for optimal performance

## ⚠ Precautions

- Sterilize before and after use
- Handle carefully to avoid bending or damaging tips

## 📦 Handling & Sterilization Details

- Compatible with autoclave, chemical, and dry heat sterilization methods
- Store in sterile, dry conditions after cleaning

## 🐾 Veterinary Application

- Commonly used in animal surgeries for precise tissue handling and manipulation

## 👨 Human Application

- Utilized in human surgical procedures for grasping and manipulating delicate tissues

## 📄 HS & HSN Codes

- **HS Code:** 9018.90
- **HSN Code:** 9018

## ❓ FAQs

**Q: What are the main uses of the curved straw tweezer?**

A: It is primarily used to grasp and hold small tissues or objects, especially in hard-to-reach areas during surgery.

**Q: Are these tweezers reusable?**

A: Yes, made from surgical stainless steel and designed for repeated sterilization.

**Q: What sizes are available for this instrument?**

A: Sizes range from 6" to 12" to accommodate different surgical needs.

**Q: Can it be used for veterinary surgeries?**

A: Yes, it is suitable for both veterinary and human surgical procedures.
